

Model Evaluation Framework

This document details our comprehensive evaluation methodology for audio recognition models.

1. Benchmark Datasets

- Standard evaluation corpora
- Cross-lingual test sets
- Real-world scenario recordings

2. Performance Metrics

- Speech recognition accuracy measures
- Event detection precision and recall
- Emotion recognition evaluation

3. Robustness Testing

- Noise resilience evaluation
- Speaker independence verification
- Accent and dialect variation testing

4. Comparative Analysis

- Baseline model comparisons
- State-of-the-art benchmarking
- Ablation studies methodology
